

Year Two Home Learning Tasks – Summer

1. This term our focus is Queens, exploring the reigns of Queen Elizabeth I and Queen Victoria. We would like your child to choose one Queen and create a small fact file that they can share with the class. These will also be displayed in the classrooms 😊
2. The Tudor topic is so vast and a fascinating period of time to say the least! We would like your child to research this time period and share some facts they have learned with the class. (We would ask you to oversee this research however, as the Tudor period is a little gruesome at times!)
3. In Computing our topic is 'Algorithms'. We would like your child to continue practising this at home using the following Disney Coding website.
<https://partners.disney.com/hour-of-code>
4. In Art the children will be observing the colours, textures and patterns of wild animals. We would like your child to create an observational line drawing or painting of an animal of their choice, copying the colours, textures or patterns as closely as possible!
5. In Science the children will be learning about animals and their habitats. We would like your child to create a habitat for an animal including all the things they would need to survive successfully there. These habitats can be drawn, modelled or even made out of Lego!
6. In Science the children will also be learning about lifecycles of both animals and humans. We would like your child to pick an animal of choice and create their lifecycle, ensuring they include all the stages!
7. In Geography, the children will continue to learn, identify and memorise the 7 continents and 5 oceans of the world! We would like your child to practise learning these by accessing the following game.
